```python
import random
import time

while(1):
        temp = random.randrange(15,45);
        if(temp >30):
                print("Hazard Detected : Temperature - ",temp);
        else:
                print("Hazard Not Detected : Temperature - ",temp);
        time.sleep(3);
```
